Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-22 and 26-27, drawn to a method of treating cancer using an high affinity adenosine A3 receptor antagonist and a chemotherapeutic cancer agent, classified in class 514, subclass 449, among others.
- II. Claims 23-25, drawn to a method of treating cancer using an high affinity adenosine A3 receptor antagonist, an adenosine-5'-triphosphate depleting agent and a chemotherapeutic cancer agent, classified in class 514, subclass 449, among others.

The inventions are distinct, each from the other because of the following reasons:
The method of Group I does not require the adenosine-5'-triphosphate depleting agent compound of Group II.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Furthermore, Applicant is additionally required under 35 U.S.C. 121 to elect a single disclosed species of high affinity adenosine A3 receptor antagonist; of an adenosine-5'-triphosphate depleting agent; and of a chemotherapeutic cancer agent, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

Art Unit: 1614

the prior art, the evidence or admission may be used in a rejection under 35

U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

An attempt to reach the attorney was made on August 10, 2005 to request an oral election to the above election requirement, but was unsuccessful.
